CX Sprint 2026.03.18

Home Portal (4) | SmartApp (2) | Servicing (6) | Sitewide (3) | Tech Enhancements (8)

Home Portal (4 items)

🆕 NEW

View Authorized Third Party

#33066

Summary:

- Authorized Third Parties Viewer Added to Home Portal Profile
- What changed: Added a dedicated Authorized Third Parties section to the borrower's Home Portal profile page.
- Who benefits: Borrowers can now view a list of people authorized to speak about their loan on their behalf, along with the full authorization history, without contacting support.

🆕 NEW

Add Mortgage Periodic Statement - Prior Servicer to Documents

#80067

Summary:

- Prior Servicer Mortgage Statements Now Available in Documents
- What changed: Added Mortgage Periodic Statement documents from prior servicers to the Home Portal Documents section.
- Who benefits: Borrowers with transferred loans can now access prior servicer statements directly in their document library, eliminating the need to call support.

🆕 NEW

Create Document Page

#89829

Summary:

- Dedicated Documents Page Added to Home Portal
- What changed: Built a new Documents page in the Home Portal, accessible from the Dashboard via the Documents card.
- Who benefits: Borrowers can browse and access all their mortgage documents from a single organized page instead of navigating multiple sections.

✨ ENHANCED

Update HouseCanary API calls to use correct ClientID/Secret for BankCMG domain

#93519

Summary:

- Corrected HouseCanary API Credentials for BankCMG Domain
- What changed: Updated HouseCanary API calls to use the correct ClientID and Secret for the BankCMG domain.
- Who benefits: BankCMG users can now successfully claim properties, save homes, and use all home value features that were previously failing due to incorrect API credentials.

SmartApp (2 items)

✨ ENHANCED

Update permissible purpose

#95040

Summary:

- Updated LexisNexis Permissible Purpose Code in SmartApp
- What changed: Updated the permissible purpose value sent to LexisNexis in identity verification API calls to use the correct regulatory code.
- Who benefits: Loan applicants' identity verification requests are submitted with the correct compliance purpose code, ensuring adherence to LexisNexis data usage requirements.

🆕 NEW

Fix TRUV Timeout Issue

#95438

Summary:

- Fixed TRUV Session Timeout Leaving Mortgage Applications Stuck
- What changed: Fixed a bug where a TRUV income and employment verification session that times out or is abandoned by the borrower could leave the mortgage application in an unrecoverable state.
- Who benefits: Borrowers who start but don't complete TRUV income verification can now continue their application without needing a support team member to manually reset the process.

Servicing (6 items)

🆕 NEW

Add Payoff Quicker Function to Payment Card

#93311

Summary:

- Added a payoff calculator to the payment card in the servicing view.
- What changed: Introduced a 'Pay Off Quicker' calculator widget on the Home Portal payment card that lets borrowers model the impact of additional payments.
- Who benefits: Borrowers can instantly see how extra payments reduce their outstanding loan balance and shorten their payoff timeline, without leaving the portal.

🔧 TECH

Upgrade Aspen Grove widgets to 1.55.0

#95551

Summary:

- Upgraded Aspen Grove Servicing Widgets to v1.55.0
- What changed: Updated the Aspen Grove servicing widget library to version 1.55.0, incorporating multiple feedback-driven improvements to escrow and payment displays.
- Who benefits: Borrowers see improved messaging in Escrow Details, clearer escrow shortage notifications, and the AutoPay setup button now correctly disables when setup is unavailable.

✨ ENHANCED

Updates to Payoff Quicker and Lump Sum calculators

#97318

Summary:

- Updated Payoff Quicker and Lump Sum Payment Calculators
- What changed: Made accuracy and clarity improvements to the Payoff Quicker and Lump Sum principal payment calculators in the Home Portal.
- Who benefits: Borrowers get more accurate projections when exploring how extra principal payments would reduce their loan term and total interest paid.

🆕 NEW

Add feature flag for Calculator page

#97375

Summary:

- Added Feature Flag to Control Calculator Page Visibility in Navigation
- What changed: Introduced a feature flag in the Admin Portal that controls whether the Calculator page appears in the Home Portal's top navigation menu.
- Who benefits: Administrators can enable or disable the Calculator navigation item per environment without requiring a code deployment.

🔧 TECH

Upgrade Aspen Grove widgets to 1.56.0

#98104

Summary:

- Upgraded Aspen Grove Servicing Widgets to v1.56.0
- What changed: Updated the Aspen Grove servicing widget library to version 1.56.0, introducing a new 'Paid in Full' account detection feature with tailored UI changes.
- Who benefits: Borrowers with fully paid-off loans see a streamlined UI that hides irrelevant actions like future payment scheduling, while their full payment history remains accessible.

🔧 TECH

Upgrade Aspen Grove widgets to 1.57.0

#98876

Summary:

- Upgraded Aspen Grove Servicing Widgets to v1.57.0
- What changed: Updated the Aspen Grove servicing widget library to version 1.57.0, adding a 'Maximum Pre Pay' safeguard to the Payments widget.
- Who benefits: Borrowers who have reached their maximum prepayment limit for the current month see a clear explanatory message and cannot accidentally submit a duplicate one-time payment.

Sitewide (3 items)

🆕 NEW

Long-Term SSO : Switch to Hosted Login

#92590

Summary:

- Seamless Single Sign-On Across CMG Domains via Hosted Login
- What changed: Switched the SSO login flow to a hosted login experience that supports seamless cross-domain authentication between BankCMG and CMG Home Loans.
- Who benefits: Borrowers can move between BankCMG and CMG Home Loans sites without re-entering credentials, while each domain's login page reflects the correct brand identity.
- Technical context: Migrated to a hosted login integration to support long-term SSO, resolving cross-domain session management limitations of the previous implementation.

🆕 NEW

Implement Spanish translation to SmartApp/HomePortal using native Angular localization

#93148

Summary:

- Implemented Spanish language localization for SmartApp and Home Portal.
- What changed: Added Spanish translation support using Angular's native i18n localization framework across SmartApp and Home Portal.
- Who benefits: Spanish-speaking borrowers can now navigate the application in their preferred language, improving accessibility for a broader customer base.
- Technical context: Built on Angular's built-in localization system for long-term maintainability and straightforward addition of future languages.

🆕 NEW

Implement Spanish translation Phase 2 (API/Alerts)

#95525

Summary:

- Spanish Language Support Extended to API Responses and System Alerts
- What changed: Extended Spanish localization to cover API response messages and system alerts across the Home Portal and SmartApp.
- Who benefits: Spanish-speaking borrowers now see system messages, notifications, and alerts in Spanish, completing the second phase of the platform's localization rollout.
- Technical context: Builds on Phase 1 Angular UI localization by adding Spanish translations to back-end API messages and the alerting infrastructure.

Tech Enhancements (8 items)

🔧 TECH

Fix duplicate claimHome API calls causing 109K+ weekly 409 errors

#93412

Summary:

- Fixed Duplicate Home-Claim API Calls That Generated 109K+ Weekly Errors
- What changed: Resolved the root cause of duplicate claimHome API calls that were generating over 109,000 failed requests per week in the ConX API.
- Who benefits: Borrowers experience fewer background errors during Home Portal initialization, and the platform's API reliability improves significantly on home claim requests.
- Technical context: Fixed the trigger logic for the claimHome endpoint, eliminating duplicate calls and reducing weekly 409 conflict errors from 109,724 to near zero (17.7% failure rate resolved).

TECH

Modify Home Portal to use new Alert Endpoints

#93862

Summary:

- Home Portal Migrated to Updated Alert API Endpoints
- What changed: Updated the Home Portal's announcement and alert display infrastructure to consume the new Alerts API endpoints.
- Who benefits: Borrowers continue to receive timely system alerts and announcements, now powered by a more reliable and maintainable alerting backend.
- Technical context: Aligns Home Portal with the new alerting system, replacing the legacy endpoint integration.

TECH

Change Alert Messages to explicitly use "en-US" as fallback culture

#95273

Summary:

- Standardized Alert Message Locale to English (US)
- What changed: Alerts now explicitly use 'en-US' as the fallback culture instead of inheriting the server's current culture setting.
- Who benefits: Borrowers consistently receive alert messages in English rather than seeing unexpected language or formatting variations caused by server locale differences.
- Technical context: Replaces the implicit CultureInfo.CurrentCulture fallback in the Alerts API with an explicit 'en-US' override.

TECH

Allow for "Global All/Any" for Tag Matching in Alerts

#96601

Summary:

- Added Global All/Any Tag Matching Option to the Alerts System
- What changed: Extended the Alerts API to support a global 'All' or 'Any' matching mode across tag criteria, in addition to per-tag matching rules.
- Who benefits: System administrators can configure more precise alert targeting rules, ensuring borrowers only receive alerts that match all, or at least one, of a defined tag set.

TECH

Add web app restart to CX deployments

#96701

Summary:

- Added Automatic Web App Restart to CX Deployment Pipeline
- What changed: Added an automatic web app restart step to the CX deployment process to ensure updated code is picked up correctly after each release.
- Who benefits: Reduces the risk of deployments silently running stale code, improving the reliability and predictability of production releases across all CX applications.

TECH

Add documentation for local container support

#97881

Summary:

- Added Local Container Documentation for SQL Server Development Setup
- What changed: Added developer documentation for running SQL Server locally using Docker containers as an alternative to direct installation.
- Who benefits: Developers can set up a consistent local SQL environment without installing SQL Server 2025 natively, reducing onboarding friction and resolving local setup compatibility issues.

🔧 TECH

Add Google Tag Manager back to SmartApp

#98006

Summary:

- Restored Google Tag Manager Integration in SmartApp
- What changed: Re-added Google Tag Manager (GTM) to SmartApp after cross-team alignment confirmed its active usage requirements.
- Who benefits: Analytics and marketing teams regain the ability to track user events in SmartApp through GTM without requiring additional engineering changes.

🔧 TECH

Update Docker documentation

#99123

Summary:

- Improved Docker Local Database Setup Documentation
- What changed: Updated LOCAL_DATABASE_SETUP.md with clarity improvements, including SQL Server memory limit configuration (MSSQL_MEMORY_LIMIT_MB=2048) across all Docker run commands.
- Who benefits: Developers setting up local environments experience less memory pressure and have clearer, more reliable guidance for Docker-based SQL Server configuration.
